

Subsonus Tag

Subsonus Tag is a battery-powered acoustic positioning transponder that operates with the Subsonus USBL.

Position Accuracy	0.25 m
Range	1,000 m
Depth Rating	2,000 m
Battery Life	18 months

Get A Quote

 Datasheet

Subsonus Tag is a low-cost acoustic positioning transponder that operates with the Subsonus USBL. It features an integrated battery, wireless charging, and a pressure tolerant display. Ultra-low-power consumption allows operation for up to 18 months on one charge.

Features

Ultra-Long Battery Life

Subsonus Tag features a revolutionary acoustic processing architecture that allows it to achieve an unparalleled battery life of up to 18 months in slow update applications.

Multi-track Technology

Multiple Subsonus Tags can be deployed in the same area and tracked using one surface Subsonus unit. Each tag has a unique address and can be assigned a name for easy identification.

Integrated Display

Subsonus Tag features a pressure tolerant display that allows divers to receive and respond to messages from the surface. The electronic paper technology consumes no power between updates of the screen graphics.

Hermetically Sealed

The revolutionary design of Subsonus Tag features total encapsulation of the electronics and batteries. This offers unparalleled reliability with no servicing required.

Completely Wireless

Subsonus Tag contains a Qi compatible wireless power receiver for convenient battery charging without using connectors. Tags can be quickly configured and updated from a smartphone using bluetooth.

Applications

Diver Tracking

ROV

Subsea Asset

Subsonus Tag Firmware

Version 2.2 | 6 Jan 2026

 Download

The latest firmware for all Subsonus Tag hardware versions. This can be loaded onto Subsonus Tag using the Subsonus Tag Manager Android app. Subsonus Tag firmware v2.2 must be used with Subsonus firmware v3.0 or newer. Refer to the [release notes](#) for further details.

Version 1.3 | 17 Dec 2019

 Download

Pre-version 2.0 firmware for all Subsonus Tag hardware versions. This can be loaded onto Subsonus Tag using the Subsonus Tag Manager Android app. Subsonus Tag firmware v1.3 must be used with Subsonus running firmware v2.4. Refer to the [release notes](#) for further details.

Subsonus Tag Manager

Version 2.1 | 9 Nov 2023

 View Online

Subsonus Tag Manager is an Android app for configuring, checking the status and updating the firmware of Subsonus Tag.
